CONSTRUCTION The Electrostatic Filter uses passive electrostatic attraction to trap airborne particles. It consists of a combination of expanded and woven electrostatic polypropylene screen, assembled in alternating layers to assure maximum filtering and internal loading capabilities. The media is enclosed in an aluminum frame, mitered and secured at one corner by rivets. The filter is designed for applications such as industrial, commercial, schools, office buildings, and hotels where a permanent filter is recommended. Maximum operating temperature on the Electrostatic Filter is 250 degrees F. Available in both standard and special sizes. Available in 3" and 4" thicknesses.

MATERIAL Filtering element shall be processed from sheet Aluminum, commercially known as 3003-H22, .025 in thickness expanded to .050 strand. Frame shall be made from sheet Aluminum 3003-H14, .040 thickness.
