## WIRING AND LIGHTING GUIDE

### Wiring the Fan

**We know wiring is hard. Let's make it easier.**

Follow these steps to get your fan wired quickly and safely. Follow the route below that best matches your wall switch setup. If you are unfamiliar with wiring or uncomfortable doing it yourself, please contact a qualified electrician.

You are going to need these:

**4 Wire Nuts (these are in the ★ bag)**

**Have a single switch?**  
Follow these steps:

Connect the white (grounded) wire from the ceiling to the white wire from the fan.

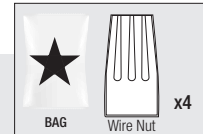

Connect the black (ungrounded) wire from the ceiling to the black wire from the fan.

Cap the blue wire from the fan. You will not need it for single switch wiring.

**Hunter Pro Tip:**

**Here is how to connect the wires:**

Push the bare metal ends of the wires together and slide a wire nut over them. Then, twist the wire nut clockwise until tight. Give it a gentle pull to make sure none of the wires are loose.

Connect the three grounding wires (green, green/yellow stripe, or bare copper) coming from the ceiling, downrod, and hanging bracket.

### ⚠ WARNING

The ceiling fan must be grounded. If the ground wire for the installation site is not present, immediately **STOP** installation and consult a qualified electrician.

### ⚠ WARNING

All wiring must be in accordance with national and local electrical codes ANSI/NFPA 70. If you are unfamiliar with wiring or in doubt, consult a qualified electrician.

**Hunter Pro Tip:**

**Have extra wiring?**

Turn the wires upward and push them carefully back through the hanger bracket into the outlet box. Spread the wires apart, with the grounded wires on one side of the outlet box and the ungrounded wires on the other side of the outlet box. Make sure that the wires are still attached to the wire nuts.

**Have dual switches?**  
Follow these steps:

Connect the white (grounded) wire from the ceiling to the white wire from the fan.

Connect the black (ungrounded) wire from the ceiling to the black wire from the fan.

Connect the second ungrounded (light) wire from the ceiling to the blue wire from the fan.

Connect the three grounding wires (green, green/yellow stripe, or bare copper) coming from the ceiling, downrod, and hanging bracket.

**Note:**

Fan style may vary.

## Assembling the Light Kit

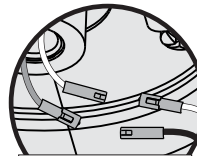

Loosen the two pre-installed screws

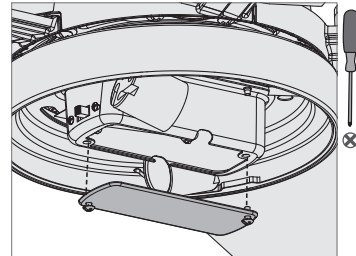

Feed the wire plugs through the center hole of the upper switch housing, then wrap keyhole slots around the screws and twist counterclockwise.

After rotating the upper switch housing into place, tighten all three screws securely.

Connect the single-pin connectors from the light kit assembly to the connectors from the fan. Connect the white wires together. Connect the blue and black wires together.

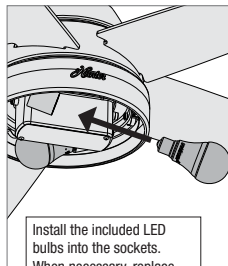

Carefully push all switch housing components into the switch housing, then install the switch housing plate using the two pre-installed light kit screws.

**⚠ WARNING**  
**FAN FALL HAZARD**  
Make sure all three screws are tight to secure the trim ring to the mounting plate.

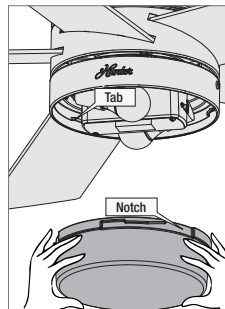

**Note:**  
Fan style may vary.

## Installing the Bulbs and Glass

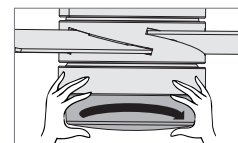

Install the included LED bulbs into the sockets. When necessary, replace with bulbs of same wattage.

Lift the globe and align the notches in the globe with the tabs in the light kit.

**Note:**  
Fan style may vary.

Attach the globe by lifting and turning clockwise one third of a full turn of the glass until it stops.

**NOTE: Check to ensure proper engagement.**

**⚠ WARNING**  
**GLASS FALL HAZARD**  
To prevent **SERIOUS INJURY** or **DEATH**, make sure that glass is properly secured.
